Summary of Report

This report displays data compiled from the City of Jacksonville (COJ) CARE database. The CARE system contains issues reported to the City from various sources and divides the issues into categories and geographic areas. The specific categories examined were CARE issues logged under the Solid Waste Division section for “Tire Dumping”, “Litter” and “Illegal Dumping”.

The geographic data was divided by Council District boundaries to provide Council Members specific trends and trajectories of the issues in their respective districts.

The data was collected for the last 3 Fiscal Years to provide sufficient information to see trends (increases or decreases) and relative magnitude of each issue per District.

TRENDS

- The same 5 Districts have the highest issue counts across all issues except “Litter”
- The 5 Districts with consistently higher “3 Year Total” counts are Districts 7, 8, 9, 10 & 11.
- District 14 had the 5th highest “3 year total” issue count for “Litter”.
- Three Districts have shown the largest decreases over the past 3 years. Districts 4, 5 and 13.
- The category that shows the most consistent increase over time is “Illegal Dumping”.

In interviews with Solid Waste Division staff involved with the collection and disposal of these items, it appears that the vast majority of the waste stream from these three categories is characterized as “non-hazardous” waste items. A small percentage of the volume is comprised of household hazardous waste items. Typical “illegal dumping” sites appear to consist of construction debris from home remodeling/construction projects or landscape/tree trimming operations by private contractors or citizens.

Top 20 Illegal Dumping Sites

1. Lem Turner and Riverview
2. 8800 Block of Adams Ave.
3. Helena and Castellano
4. 45th and Doeboy tOP 20 DUMPING SITES (FIGURE 2)

REPORT ON THE BLIGHT PROCESS

Jeff Foster, Solid Waste Division

LYNWOOD ROBERTS ROOM
FIRST FLOOR CITY HALL
117 WEST DUVAL STREET
JACKSONVILLE, FL 32202

SEPTEMBER 18, 2014

Blight Assessment and Response Process

The Solid Waste Division resolves blight issues that are created due to the presence of solid waste materials. The resolution of blight issues is largely handled through the direct collection and proper disposal of solid waste materials improperly placed (dumped) on City right-of-ways or other public areas. Alternative resolutions to blight issues may involve working with private property owners or tenants on the proper disposal of waste on private property or through education, citation warnings and forced cleanup of private property through proper regulatory and legal channels.

The identification of blight issues are generated through a variety of stakeholder reporting. The most common ways blight is identified and communicated to Solid Waste are listed below:

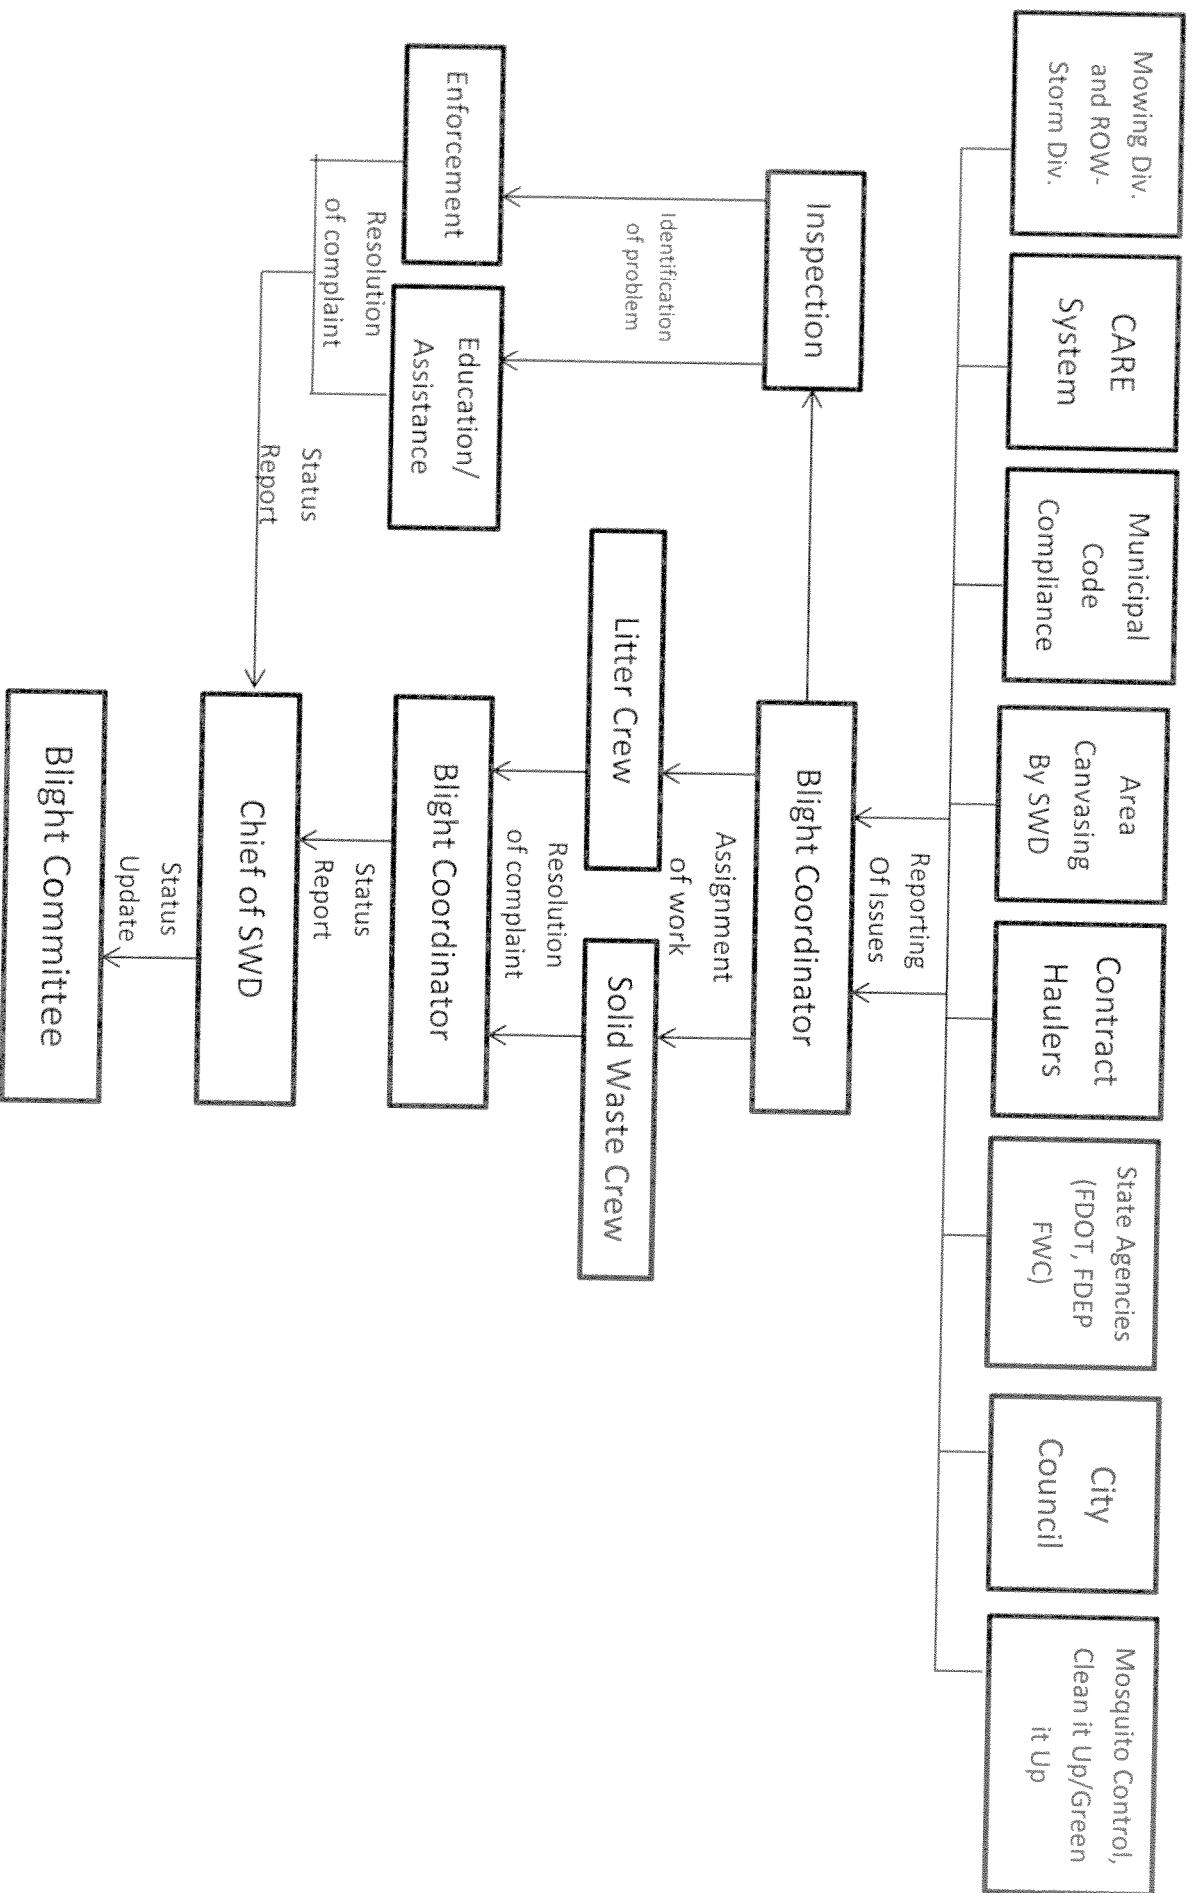

- 1) CARE system reports
- 2) Municipal Code and Compliance
- 3) Right of Way & Stormwater Maintenance and Mowing & Landscape Division
- 4) Contract Hauler (Advanced Disposal, Republic Services, WastePro)
- 5) State Agency (FDOT, FWC, FDEP)
- 6) Solid Waste Division personnel identification/area canvassing
- 7) Council Members
- 8) Other reporting such as Clean it Up/Green it Up and Mosquito Control (tires).

Information is gathered from the identified sources by the Blight Coordinator through the CARE system, emails and phone conversations. Depending on the issue, the Blight Coordinator will directly assign the pick-up of solid waste material to the Litter Crew or other Solid Waste Division personnel or the Blight Coordinator may inspect the issue and resolve it through other means such as education and assistance to the property owner. The Coordinator may also use enforcement tools to resolve the issue.

The resolution of Blight issues that are not directly handled by the Blight Coordinator is reported back to the Blight Coordinator by the waste collection crews. The Blight Coordinator will close CARE issues and/or disseminate information to the reporting source indicating that the issue has been resolved.

The Blight Coordinator supplies weekly updates on the Blight cleanup efforts to the Chief of the Solid Waste Division. The Blight Coordinator informs the Chief of Solid Waste of any outstanding or unresolved issues. The Solid Waste Division Chief reports to the Blight Committee on the status of blight issues related to solid waste.

Blight Assessment and Response Flowchart

Specific Action Items to Address Blight

1. Four (4) COJ Supervisors and 16 inmates canvas the COJ Service Area IV on Wednesdays for collection of yard waste following normal Tuesday yard waste collections.
2. One (1) dedicated tire truck and driver for daily collection routes in COJ service Area IV.
3. Two (2) Litter Crews each consisting of one (1) driver and two (2) workers collect litter from within the entire City five days a week (Mon- Fri).
4. Three (3) Solid Waste Residential Collection crews each consisting of one (1) driver and three (3) workers perform concentrated clean –up efforts on Wednesdays in the current zip code target area.
5. Formal meeting notice with the three residential haulers for enforcement of Section 19.9 of their contract which stipulates a \$100 per incident for “non-reporting of illegal dumping along their routes...”
6. The above efforts represent a total weekly staffing load of 536 work-hours.
